CHANDRASHEKAR BALA

Cybersecurity Research | Penetration Testing | Security Engineering

Hyderabad, Telangana, India | +91 91330 93202 | chandrashekar-bala@protonmail.com
LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Cybersecurity professional with hands-on experience in penetration testing, vulnerability assessment, and security research across applications, networks, and Linux systems. Skilled at investigating security weaknesses, understanding how they can be exploited, and turning findings into practical recommendations. Brings a research-driven approach to problem-solving, with a focus on understanding how systems fail and how they can be made more secure.

TECHNICAL SKILLS

Application Security	Burp Suite, OWASP ZAP, SQL injection testing, authentication and access-control testing, vulnerability validation
Network Security	Nmap/NSE, Wireshark, Nessus, Metasploit, network reconnaissance, service enumeration, DNS and TLS analysis
Threat Research	OSINT, threat-report analysis, threat intelligence, MITRE ATT&CK, adversary technique research
Reverse Engineering	Ghidra, GDB, binary analysis, debugging, suspicious-file investigation in controlled settings
Digital Forensics	Volatility, Windows artefact analysis, filesystem and registry investigation
Systems and Wireless	C, GCC, Linux kernel headers, Linux driver debugging, Git, Wi-Fi security testing, Aircrack-ng
Scripting and Platforms	Python, Bash, SQL, Linux, Kali Linux, Windows

PROFESSIONAL EXPERIENCE

Team Lead – Cybersecurity Oct 2026 – Present
Networkwalks Technologies

- Lead and perform network reconnaissance, network analysis, vulnerability assessments, and penetration testing to identify exposed services, security weaknesses, and potential attack paths.
- Use security assessment tools and manual testing techniques to investigate vulnerabilities, validate findings, and assess their potential impact on target systems and applications.
- Coordinate assessment activities, review technical findings and supporting evidence, and determine priorities for further investigation and remediation.
- Communicate assessment results, explain technical risks, and provide actionable remediation recommendations to support vulnerability resolution.

Cybersecurity Intern Sep 2026 – Oct 2026
Networkwalks Technologies

- Conducted network and application reconnaissance, service enumeration, and vulnerability assessments using cybersecurity tools.
- Investigated potential vulnerabilities, manually validated findings, and collected supporting technical evidence.
- Documented security weaknesses, potential attack paths, impact, and remediation recommendations.

Independent Cybersecurity Researcher Jul 2024 – Present
Independent Research

- Conduct independent research across web application security, network reconnaissance, wireless security, and Linux systems.
- Investigate application vulnerabilities, security behaviour, and system weaknesses through controlled testing, technical analysis, and documented research.
- Research threat intelligence, OSINT, suspicious-file behaviour, and Windows forensic artefacts; develop and troubleshoot Linux wireless-driver code through practical systems-level investigation.

SELECTED SECURITY PROJECTS

Authorized Web Application Security Assessment – Mediroza General Hospital Sep–Oct 2026

- Documented eight security findings, including SQL injection, authentication bypass leading to protected report retrieval, directory exposure, database-backup exposure, verbose errors, predictable storage paths, error-log disclosure, and technology fingerprinting.
- Investigated how application weaknesses could be combined into an attack path; documented technical evidence, potential impact, and remediation guidance.
- Prepared findings to support remediation and subsequent verification.

Case study: View assessment repository

RTL8812BU/RTL8822BU Linux Wireless Driver Research 2026

- Modified 13 source files in a Linux wireless-driver compatibility project using C, GCC, kernel headers, and Git.
- Investigated build and runtime compatibility for a TP-Link Archer T4U v3 wireless adapter through iterative builds and physical hardware validation.
- Worked with Wireshark and Aircrack-ng in wireless testing workflows.

Source code: GitHub repository

ADDITIONAL SECURITY RESEARCH

Web Application Security Labs 50+ PortSwigger labs

- Practised vulnerability identification and validation across SQL injection, authentication, access control, cross-site scripting, session handling, and HTTP behaviour.
- Analysed reproduction steps, security implications, and remediation approaches.

Network Reconnaissance and Service Analysis Independent research

- Used Nmap/NSE, DNS and WHOIS lookups, certificate inspection, TLS checks, and web-service enumeration to examine externally observable services.
- Organised scan results and supporting artefacts for repeatable analysis and technical review.

Vulnerability Research and Digital Forensics Controlled lab investigations

- Investigated vulnerable lab systems and privilege- escalation paths in isolated environments.
- Used Ghidra and GDB for binary analysis and debugging research, alongside Volatility and Windows artefact analysis for forensic investigations.

CERTIFICATIONS

- **Certified LLM Security Expert (CLLMSE)** – Red Team Leaders, Oct 2026. Verify credential
- **Google Cybersecurity Professional Certificate** – Coursera, Feb 2026.
- **Tata Cybersecurity Analyst Job Simulation** – Forage, Aug 2026.
- Intro to Blockchain/Web3 – edX, May 2024.
- Natural Language Processing Specialization – Coursera, Apr 2023.
- Java Full Stack Developer Training – CipherSchools, Feb 2023.
- Google Cloud Facilitator Program – Google, May 2022.

EDUCATION

B.Tech in Computer Science and Engineering 2024
Lovely Professional University, Punjab | Minor in Machine Learning

Assessment approach: Discover | Validate | Investigate | Assess Impact | Recommend Remediation | Retest
